Week 14
Potty about
Pollinators

Bag Gardening

Even small outdoor spaces can provide much needed food and shelter for pollinating insects. Grab a few recycled materials and some soil and create your very own small scale garden in a bag! Keep an eye out for those visiting bees and butterflies!

Wildlife Corridor Game

Pollinating insects rely on the availability of pollen and nectar rich flowers for food and greenspaces for habitat and shelter. This fun, active game will help you understand the importance of green spaces for insects. You'll need to ask a couple of friends or family members to help out too!

Home for Minibeasts

Help younger children engage in the fascinating life of minibeasts! From going on a hunt outdoors, to comparing different environments and creating your own minibeast habitat, this activity sheet gives you lots of ideas to help children ages 3 to 5 take a peek into the world of the minibeast!

Pollinator survey

Pollinating insects need our help to survive. Planting pollinator friendly plants and creating insect homes all helps, but how pollinator friendly is your garden? Take part in this national survey to help find out more about the health and status of our insect population and upload your results!

Make a Pollinator Promise

As part of our national Polli:Nation project, school children and adults up and down the country signed up to support our pollinating insect population by promising to take some form of action to help, No matter how big or small – it all makes a difference! Click on the link to find out more.
