

Sustainable Home Learning and Play

These activities are designed for going to a safe outdoors space such as a garden or local park. If this is not possible every activity has an indoors adaptation below. For more ideas and video demonstrations join our Facebook group www.facebook.com/groups/2947052738685771/

All

Week 13
Wonderful
Wildlife.

Tiny Beastie Tally Trail.

There are tiny critters everywhere! Next time you go for a walk, take a notebook and a pencil and keep a tally mark record of all the creatures you spot. Ants, bees, beetles, flies. Look closely under the leaves of any plants - you might see a caterpillar!

Birdy Surveys

Bird watching is a fun, free activity. It requires no specialist equipment, just patience and clothing suitable to the season. Use our survey sheet to keep a record of what you see. Why not use your Bushcraft skills to build a bird hide to keep yourself hidden!

Tweet Treats

To help find out what birds visit your garden, provide some bird food. It will encourage those birds to stay and more to visit. You can buy bird feeders from the shops, but why not make your own? All you need is some bird seed, some lard, pipe cleaners or string - or make one from pine cones you've collected.

Life Cycle Role Play.

Make a mimed drama out of an animal life cycle! Can you investigate the process of change known as metamorphosis? This idea will have you hopping into some fun in no time!

What creatures can you think of with interesting life cycles?

Conversation with a Cuddly Creature

Everyone has a cuddly toy in their bed, don't they? But what kind of creature is it? Get out your wildlife books or go online and find out more. What country is he from? Is the climate hot or cold? What sort of home does she live in? What do they eat? Why not create a little fact file about your bedroom animals?
